EDUCATION

Netaji Subhash Engineering College — Kolkata, India
B.Tech. in Information Technology; CGPA: 8.60 — 2023 – Present

Mansur Habibullah Memorial School — Kolkata, India
Higher Secondary (ISC); Percentage: 90.25 — 2021 – 2023

SKILLS SUMMARY

- **Languages:** Java, JavaScript, SQL
- **Frameworks:** React, Node.js, Express.js
- **Tools:** Visual Studio Code, Git, Postman, MySQL
- **Soft Skills:** Communication, Team Management

WORK EXPERIENCE

Track Winner & Research Paper Presenter — **May 2026**
International Conference on Artificial Intelligence Driven Computing, Analytics and Networks — Punjab, India

- Presented original research work to an international audience of researchers, PhD scholars, and academic professionals from countries including Indonesia, South Korea, China, Taiwan, and India.
- Competed among more than 900 submitted research papers, with only 220 papers selected for presentation following peer review.
- Secured **Track Winner** recognition, ranking among the top 26 papers across all conference tracks for research quality, novelty, and presentation.
- Defended the methodology, mathematical modeling, and experimental results during an interactive technical session with domain experts and senior academicians.

Research Intern — **June 2025 – July 2025**
National Institute of Technology Durgapur — Durgapur, West Bengal

- Studied the Influence Maximization problem in Social Network Analysis, analyzing diffusion models such as Independent Cascade (IC) and Linear Threshold (LT).
- Explored machine learning and deep learning models including GNNs, TGNs, and LSTMs for temporal and static graph data.
- Conducted a literature review on centrality measures such as degree, betweenness, and eigenvector centrality for identifying influential nodes.

PROJECTS

MediSync – Doctor Appointment Booking Platform — **LINK**

- Developed a full-stack healthcare web application using the MERN stack (**MongoDB, Express.js, React.js, Node.js**) that enables users to browse doctors by specialization and book appointments online.
- Implemented user authentication and role-based access control for patients and administrators using JWT-based authentication.
- Built an intuitive admin dashboard to manage doctors, users, appointment records, and doctor availability from a centralized interface.
- Developed RESTful APIs for authentication, doctor management, appointment booking, and administrative operations.
